

# Assessment

## Business Requirements

We want to keep record of our clients that visited our sites to purchase a particular product. In respect to this we want a table to that stores client login details, orders history and payment history.

## Objectives

1. Create apis that enables the client to register.
2. Apis that allows client to see their order history.
3. Apis that allows user to edit their information.
4. Write unit test for each of the apis.
5. Create documentation your apis.

## Grades

1. Does the apis work (40%)
2. Did you write unittests (20%)
3. Did you document (20%)
4. Did you follow software best practices and python coding standards (20%)

## Submission

- Create a github repo, push your project and send us the link
- Add all dependencies to enable program run successfully.
